About this learning activity

Exploring Cloud Computing is designed to introduce you to the world of cloud computing: what it is, what its types are, what services it provides, and how it has changed the way people store and access information.

This module is appropriate for everyone: students, working professionals, job seekers, and anyone looking to expand their skills or transition into cloud computing-related roles.

What you'll learn

After completing this module, you should be able to:

- Define cloud computing
- Determine the benefits of cloud computing
- Identify the two types of servers used for cloud storage
- Identify the three cloud deployment models
- Describe the four cloud service models
- Distinguish between on premises and off premises

About this learning plan

Computer and information technology (IT) jobs are in demand and the cloud market is growing. The cloud is driving technological innovation and serving as the foundation for business innovation. Are you ready for this and the future **ahead**? Learn the basics of cloud computing, service models, deployment models, software, and the many ways businesses benefit from cloud technology. Then, get practice working with cloud computing in a series of simulations to build and deploy a Docker container and create and review the security settings for an IBM Cloudant database. Finish by gathering
